Mentryville Capital Improvements Grant Request - Additional Information

Project Objectives: The proposed grant will be used to plan, design, permit, and implement water infrastructure replacement at Mentryville. The improvements will enhance the utility and safety of the existing resources, contribute to a more enjoyable user experience, and provide a reliable source for the protection of existing facilities and natural resources from wildfire. The new water line will be constructed in the location of the existing water line and will follow the same alignment, parallel to Pico Canyon Road.

Decisions regarding the specific materials to be used will occur later as the Project is developed. The work will include excavating the old pipeline, laying new pipeline and connections, and connecting the new pipe to the supply and water tank. It is expected that the excavation will encounter numerous boulders and other obstacles, and that some amount of rework to pipe joints will be required as the new pipe fills and pressurizes.

The project is part of a larger effort to increase water use efficiency at mrca-operated facilities within the Santa Clarita Woodlands Park. The importance of rehabilitating the water line at Mentryville is heightened during a time of increased awareness of the value of water and Best Management Practices for water conservation are most critical.
