Brief Project Description:

Activities that increase parkland resilience to the effects of fire, including activities to manage vegetation and reduce flash fuel loads to decrease wildfire risk and protect watersheds, protect habitat, improve air quality, and promote watershed health. Proposed tasks include removal of weeds, dry and dead materials, invasive species, and other hazardous flammable vegetation; removal of dead, diseased and failing trees that pose a fire or fuel load threat; and execution of resiliency improvements to capital assets, ensuring greater longevity and usability for existing structures and public facilities.
